

RE-ORDER-IT

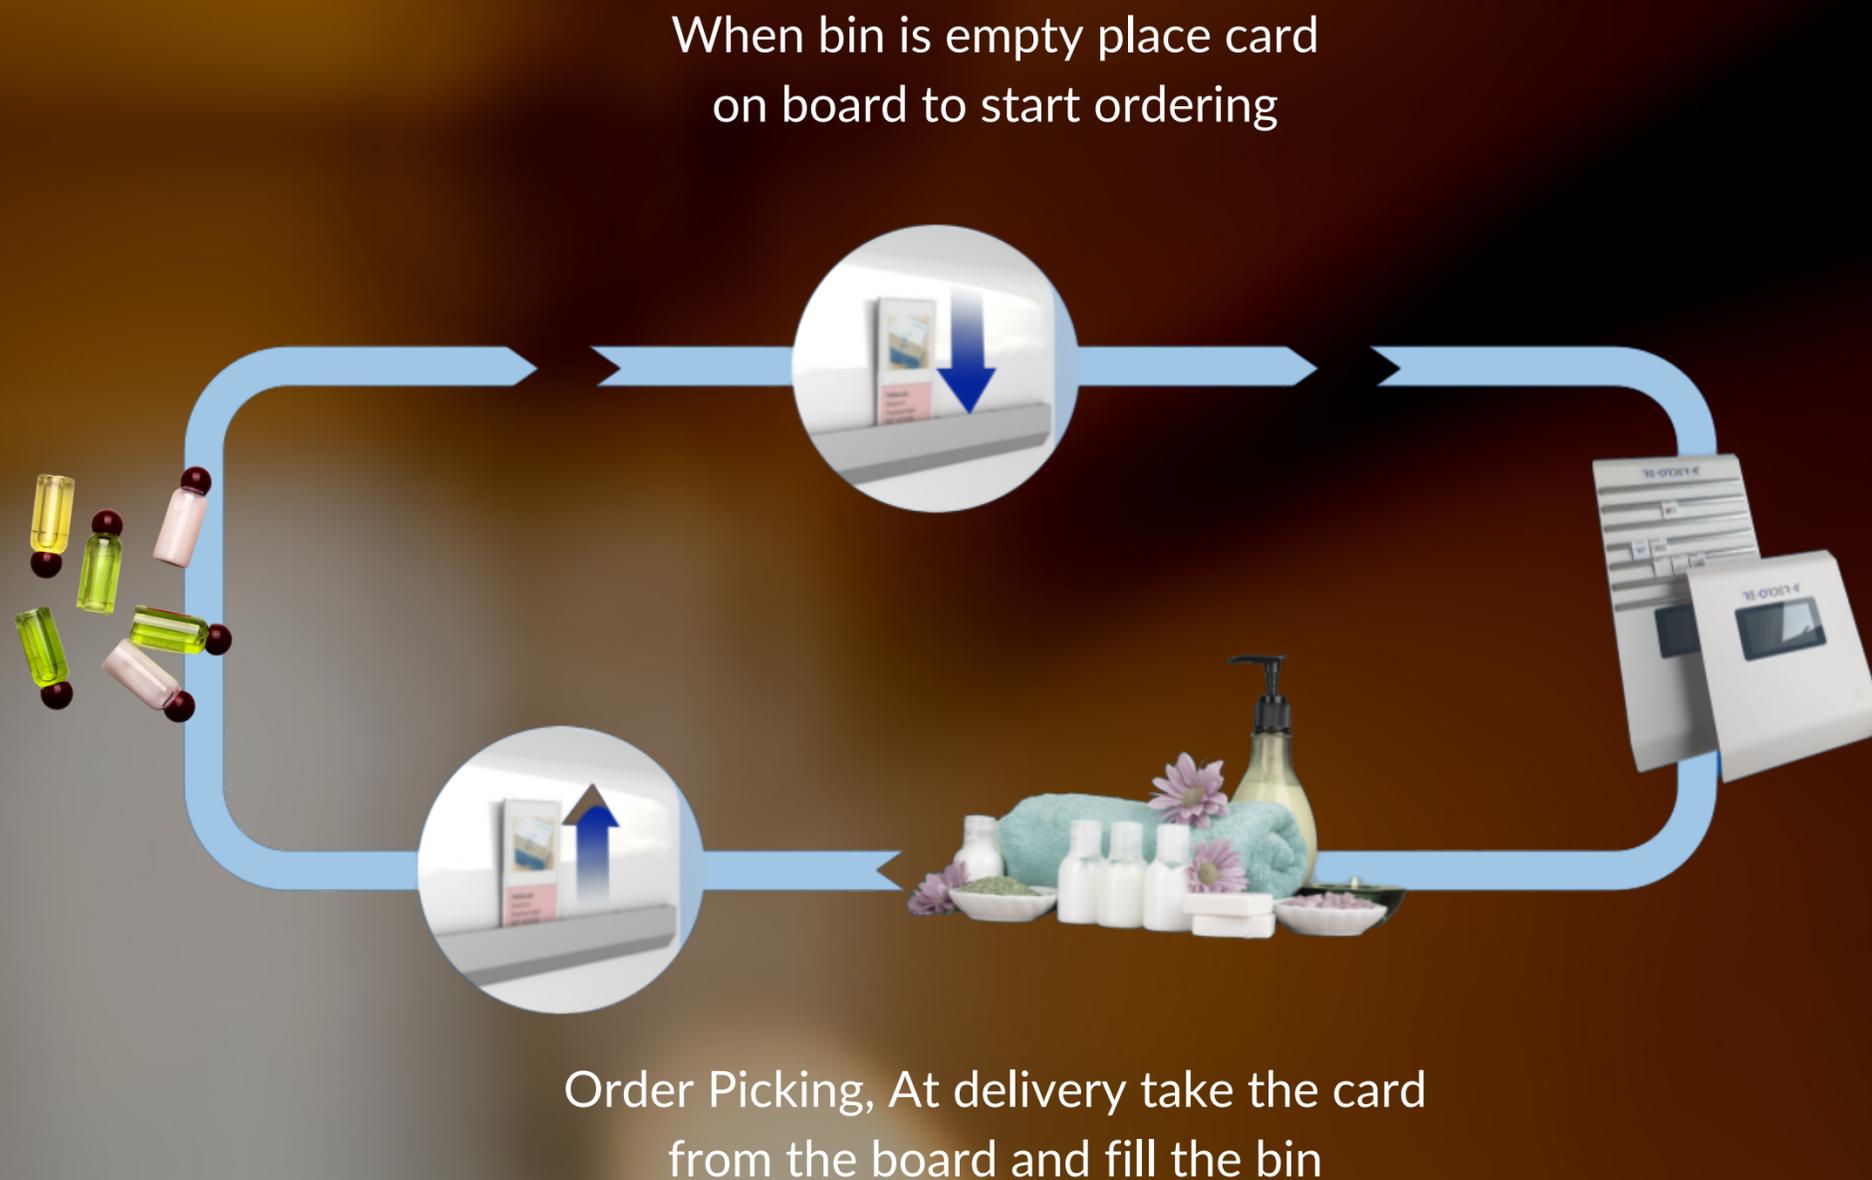

INTELLIGENT INVENTORY MANAGEMENT FOR THE HOSPITALITY SECTOR

- Optimize stock levels so you are always in control
- Significant cost saving through lean processes - up to 70% lower stock levels
- Prevention of waste because product expiration is prevented
- Housekeeping staff can completely focus on service by reducing their administrative workload

RE-ORDER-IT: 2 BIN KANBAN SYSTEM

Ideal for daily high turnover supplies

SYSTEM COMPONENTS & FUNCTIONALITY

CARDS

An RFID kanban card represents a certain article for a certain location or customer.

The unique number of the chip inside the card is stored in a database and linked to information like item number (SKU), the required location and amount to re-order.

Special holders are available to easily integrate cards into your existing storage rooms or locations.

New cards can either be printed by your own organisation or feel free to make use of our printservice. Both reusable and disposable cards are available.

R-O-I BOARDS

The board is equipped with an RFID reader and a user-friendly touch screen. When a card is placed on the e-board, the RFID chips inside the cards will be detected automatically.

The board communicates via 4G and wifi to the central database. Via the database all boards and cards are monitored.

The system supports remote updates. Logistics replenishment orders are being ordered via the database at configurable intervals. The touch screen supplies real-time feedback to your employees.

BIG DATA AND DASHBOARDS

The Re-order-it system integrates seamlessly with your existing warehouse or ERP system. Master data is synchronized and orders are forwarded via automatic messaging.

Various message formats such as JSON and XML are supported. A user interface is available to monitor the system. A dashboard provides useful insights in daily affairs and in particular unexpected deviations.

The report section keeps a full history of all local operations and provides you with big data for further detailed analysis.

BOARD SETUP IN A HOTEL

A BOARD IN EACH STORAGE ROOM

Orders from floor/pantry to hotel warehouse

HOTEL WAREHOUSE

Order from warehouse to Supplier/central DC

TECHNICAL SPECIFICATIONS

LARGE VERSION

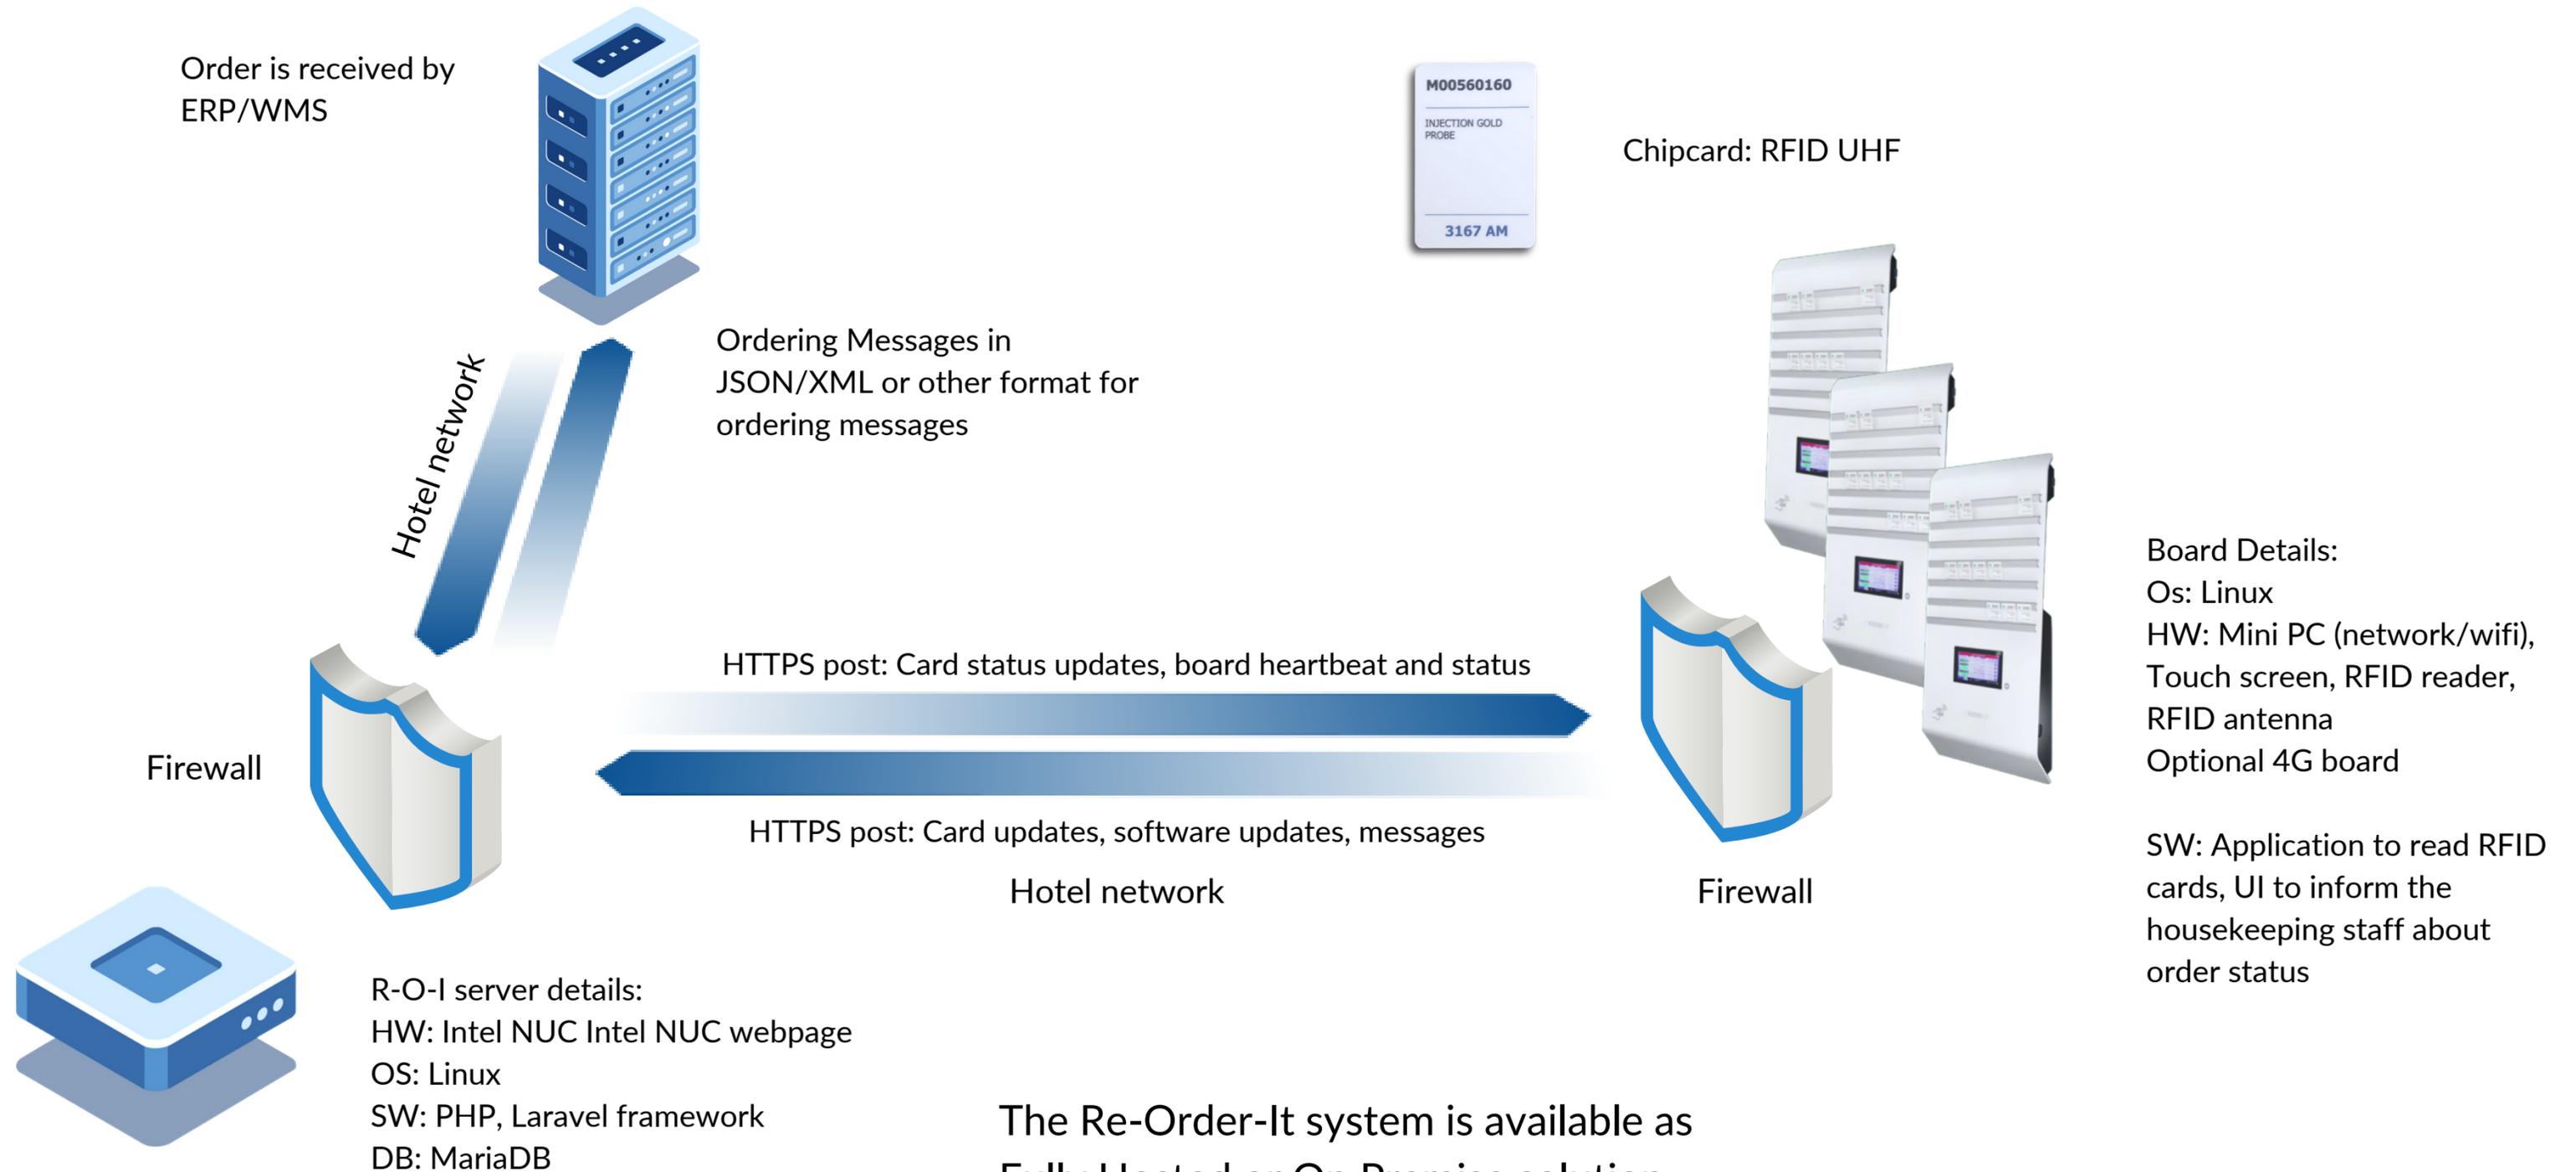

Dimensions:	730 x 370 x 73mm
